

PROTECT THE RIGHTS

OF THE UNBORN

PROTECT their right to clean air and water, to live in a non-toxic environment and to have the use of resources such as minerals, forests, rivers, oceans, farms and fisheries.

PROTECT their right to see an ancient forest, to experience the diversity of life and to live an uncrowded, meaningful life. Protect their right to continued life on this planet. Protect their right to a future.

HOW? By using less, wasting less, consuming less and conserving more. When you are deciding whether or not to have children, consider the earth's ability to support them as well as your own. A child born in an industrialized nation will have 30-100 times the impact of a third world child.

PRACTICE birth control. If birth control fails, use safe, early term abortion. Overpopulation of humans is depleting earth's resources, changing the climate and causing mass extinctions of other species. Do your part to leave a liveable world for future generations.
